1. Mission

To build an **AI-ready Chhattisgarh** by **empowering citizens, government departments, businesses, MSMEs, startups, and institutions** with inclusive and responsible AI capabilities that enhance productivity, improve public service delivery, increase income opportunities, and accelerate economic growth. The Mission will focus on **large-scale AI skilling** and certification, deployment of **practical AI solutions** across governance and industry, promotion of startup-led innovation, and development of multilingual and local-language AI technologies, while leveraging existing **National AI infrastructure** and platforms to ensure efficient, scalable, and non-duplicative implementation.

The **Chhattisgarh State Artificial Intelligence Mission (CG-AIM)** is a flagship, mission-mode initiative of the Government of Chhattisgarh to-

- i. Accelerate the development and adoption of AI in government and public.
- ii. Development of human resource capable of using AI as a technology
- iii. To align and accelerate the achievement of goals under the India AI Mission in Chhattisgarh.

Through mission-mode execution, CG-AIM will position Chhattisgarh as a **National leader in applied Artificial Intelligence**, delivering measurable public value, strengthening institutional capacity, enabling innovation and entrepreneurship, and ensuring that the benefits of AI reach all sections of society, particularly in health, education, agriculture, tribal welfare, and rural development.

2. Vision

Chhattisgarh as a leading state in applied AI—a State where citizens learn, build and use AI safely in their own language, where government is a lead user of trustworthy AI, and where businesses grow jobs and earnings through AI-driven productivity.

3. Objectives

The Chhattisgarh AI Mission (CG-AIM) is conceived as the State's flagship umbrella program to accelerate the **adoption, governance, and innovation of Artificial Intelligence** across government, academia, industry, and society.

i. **Build AI Capacity and Innovation Ecosystem in the State**

The Mission aims to build a strong and sustainable foundation for Artificial Intelligence in Chhattisgarh by developing skills, knowledge, research, and innovation capacity across government employees, students, youth, startups, and public institutions. This objective focuses on preparing people and institutions to understand, develop, and apply AI in practical ways, and on creating an enabling ecosystem that encourages innovation, entrepreneurship, and collaboration between government, academia, and industry.

ii. **Leverage Artificial Intelligence for Inclusive Development and Public Good**

The Mission seeks to use Artificial Intelligence as a tool to address key social and development challenges faced by the State. This objective focuses on applying AI solutions to improve outcomes in priority sectors such as health, education, agriculture, tribal welfare, and rural development, with special emphasis on reaching the last mile and ensuring that the benefits of AI are inclusive, equitable, and socially impactful.

iii. **Enable Responsible, Secure, and AI-Driven Governance**

The Mission aims to strengthen governance by integrating Artificial Intelligence into government processes to improve efficiency, transparency, and responsiveness of public service delivery. At the same time, this objective emphasizes the responsible and secure use of AI by ensuring alignment with National guidelines, legal frameworks, and ethical principles, thereby building trust and institutionalizing AI as a reliable tool for governance reform.

4. Activities under AI Mission

Chapter 1: Build AI Talent and Institutional Capacity

Overview

This Mission Chapter focuses on building a **comprehensive, inclusive, and sustainable Artificial Intelligence talent pipeline** across Chhattisgarh. The objective is to ensure that students, youth, professionals, researchers, and government employees across the state acquire **practical, job-oriented, and industry-relevant AI skills**, and that public institutions evolve into long-term centres of AI education, skilling, and research.

Recognising that large-scale and responsible adoption of Artificial Intelligence depends fundamentally on human capacity and institutional readiness, the Mission adopts a continuous, multi-level approach covering early exposure in schools, workforce skilling, teacher capacity development, institutional strengthening, and research ecosystem growth. The approach emphasises progressive learning pathways, institutional partnerships, and alignment with national education and skilling initiatives

Activities:

The State will implement **continuous and practical AI skilling programs** ranging from basic awareness to advanced and certification-level training. These programs will be designed to focus on **real-world applications, hands-on learning, and employability**, ensuring access to AI education for learners from diverse socio-economic backgrounds and all regions of the State.

1. AI Capacity Building for School Students

The objective of this component is to introduce Artificial Intelligence (AI) concepts at an early stage and promote **computational thinking, problem-solving ability, and innovation among school students** across the State.

1.1 Key Activities

a) AI Awareness Programme in Government Schools

- Conduct statewide **AI awareness campaigns** for students from **Classes VI to XII**.
- Introduce foundational concepts including:
 - Artificial Intelligence
 - Machine Learning
 - Robotics
- Integration of **AI literacy modules within the ICT curriculum** in alignment with national education initiatives.

b) Establishment of AI Clubs in Schools

- Creation of **AI and Robotics Clubs** in government schools.
- Promotion of **student-led innovation projects** addressing local challenges through AI-based solutions at District level
- Provision of **mentorship support** through partnerships with universities, technical institutions, and industry experts.

c) AI Hackathons for School Students

- Organization of **Annual State-Level AI Hackathons** and innovation challenges for school students at District level which can be led by Centre of Innovation proposed by 36 Inc at IIIT Naya Raipur.
- Development of problem statements addressing **local and societal issues**, including:
 - Agriculture
 - Healthcare
 - Environmental sustainability
 - Public service delivery.

d) Teacher Capacity Building

- Conduct structured **training programmes for Government school teachers** to enable them to act as AI facilitators.
- Development of **AI teaching modules, digital content, and learning resources** for classroom use.

2. AI Capacity Building for Higher Education Students

The objective is to develop **industry-aligned AI skills among undergraduate and postgraduate students** and promote innovation-driven learning.

2.1 Key Activities

a) AI Skill Development Programmes

- Launch certification programmes with the help of institutions like IIT IIIT, NIT and Central Universities in:
 - Artificial Intelligence
 - Machine Learning
 - Data Science
 - Data Analytics.

Any government institution student can take up these certifications course the as per the norm decided by the nodal department.

- Adoption of **online and blended learning models** in collaboration with national digital learning platforms.

b) AI Innovation Challenges

- Organization of **statewide AI innovation competitions, hackathons, and ideation challenges**.
- Problem statements aligned with **government priorities and real-life governance challenges**.

c) Student AI Project Grants

Provision of **financial support for student-led AI projects which will be provided by the nodal department**, particularly those addressing priority sectors such as:

- Agriculture
- Healthcare
- Education
- Governance
- Environment and climate resilience.

3. AI Capacity Building for ITIs and Polytechnic Institutions

This component aims to equip trainees with **AI-enabled industrial skills aligned with Industry**.

3.1 Key Activities

a) Introduction of AI-Enabled Training Modules

AI-related modules may be introduced in relevant industry oriented training including:

- AI automation
- Predictive Maintenance
- Automation
- Industrial Internet of Things (IIoT)

Collaboration can be done with manufacturing industries for **apprenticeships and practical exposure**.

b) Establishment of AI Data Labs

- Development of **AI-enabled Laboratories** in selected ITIs.

4. AI Capacity Building for Technical Education

Institutions will focus on **advanced AI research, innovation, and development of sectoral AI solutions.**

4.1 Key Activities

a) Establishment of Centres of Excellence (CoEs)

- Creation of **AI Centres of Excellence in leading universities and institutions** in the State.
- Focus areas may include:
 - AI in Agriculture
 - AI in Healthcare
 - AI in Governance
 - AI in Natural Resource Management.

b) AI Research and Innovation Programmes in leading Government Institutions

- Provision of **research grants for faculty members and research scholars.**
- Promotion of **interdisciplinary AI research initiatives.**

Framework for this will be prepared by Technical Advisory Committee.

c) AI Startup and Innovation Ecosystem

- Integration with **State incubation centres and startup ecosystem.**
- Support for **student and faculty-led AI startups.**

d) Advanced Academic and Research Programmes

To strengthen long-term institutional capability, the Mission will promote AI-focused research and development in public institutions.

- **Faculty Chairs** may be established in public sector institutions under the Central and State Government, subject to requests from the institutions and approval by a Technical Committee led by academia, constituted as per directives of the Governing Council.
- **PhD fellowships** will be supported in public institutions of the State and Centre, as per Mission directives, to encourage advanced research, innovation, and knowledge creation in Artificial Intelligence.
- Seed funding/ Equity/ Accelerator Program grant aligned to State grant policy will be given.
- Private Institutions from Chhattisgarh ranked among the top performers as per the National Institutional Ranking Framework (NIRF) will be eligible to participate, based on a qualitative framework proposed by the Nodal department.

- In addition, the Mission will promote **AI-focused research and development** in public institutions by supporting faculty positions, doctoral research, and applied research initiatives aligned with State priorities as mandated by GC from time to time.

5. Institutional Mechanism

The AI Capacity Building component under the Chhattisgarh AI Mission may be implemented through a multi-tier institutional framework involving State Government departments, educational institutions, industry partners, and academic organisations.

The Mission will adopt a phased and scalable implementation approach to ensure systematic rollout across:

- School Education
- Higher Education
- Technical Education
- Government Education institutions across the State like IIT, IIIT, NIT and Central Universities.

6. Role of Mission Directorate

The Mission Directorate of the Chhattisgarh AI Mission may function as the nodal implementing authority responsible for overall planning, coordination, monitoring, and evaluation of AI capacity-building initiatives.

Key Responsibilities

- Preparation of Annual Implementation Plans (AIPs).
- Identification and empanelment of participating institutions and trainers through tendering process.
- Development of training curriculum, course content and learning resources to be done by respective nodal department in co-ordination with Mission Directorate
- Coordination with government departments, academic institutions, and industry partners.
- Monitoring programme implementation.
- Conducting periodic impact assessment and programme evaluation.

Role of Technical Advisory Committee (TAC)

A **Technical Advisory Committee** will provide academic guidance, technical oversight, and strategic direction for AI capacity-building initiatives to the Mission Directorate

The Technical Advisory Committee may:

- Review and recommend AI curriculum frameworks, training modules and trainers.
- Provide guidance on emerging AI technologies and industry trends.
- Evaluate proposals for non-accredited academic programmes and courses.
- Recommend standards for AI labs and Centres of Excellence.
- Review the quality and relevance of training programmes.

Course Accreditation and Curriculum Integration Mechanism

In order to ensure quality, standardization, and recognition of AI-related learning programmes, the Chhattisgarh AI Mission Directorate will devise a mechanism for offering Accredited and Non-Accredited AI Courses across educational institutions in the State.

This framework will enable institutions to introduce formal academic programmes as well as short-term skill courses while maintaining academic integrity and alignment with National standards.

Integration of Non-Accredited Courses into Academic Curriculum

To ensure adoption of selected non-accredited AI courses may be integrated into academic programmes through the following mechanisms:

- Non-accredited course can be done by the approval of Governing Council after the review and recommendations of the Technical Advisory Committee
- Non-accredited course certification will be issued after consent from concerned institutions like IIIT, IIT and NIIT who have designed the courses.
- A certificate repository portal will be created by Mission Directorate, certificates will be issued in machine readable format preferably Aadhaar enabled for integration with Digi Locker.

Partnerships and Collaboration

The Mission Directorate may undertake strategic partnerships/ empanelment through tendering process with:

- NIRF Top 100 National institutions
- Universities and research organisations
- Technology companies and AI startups
- Industry associations
- International knowledge partners

These partnerships will support:

- Curriculum development

- Faculty training and knowledge exchange
- Internship opportunities
- Access to AI tools and technology platforms
- Collaborative research initiatives.

7. Implementation Strategy

Artificial Intelligence (AI) is expected to play a significant role in driving digital transformation, economic growth, and innovation. In order to build a future-ready workforce and strengthen the State's research ecosystem, the Government of Chhattisgarh proposes to implement a comprehensive **AI Capacity Building and Research Program** under the Chhattisgarh AI Mission.

The implementation strategy focuses on creating a structured pathway for AI learning and research across Schools, ITIs, Polytechnics, Higher & Technical Education Colleges and Universities, ensuring that students acquire foundational knowledge, applied technical skills, and research capabilities in AI through HUB and SPOKE model.

AI Data labs in Schools and Institutions will be setup and run through Govt. of India/ State funds or through Private partners. For regions like Bastar and Sarguja Mission Directorate may set up the Data Labs through its funds.

Following are the key components of the Implementation strategy:

Component	Responsible Agency
Empanelment of training partners and Monitoring	AI Mission Directorate
AI Curriculum Framework	NCERT / CBSE / IITs/ National Institutions/ Private Partners under supervision of TAC
State Adaptation	Chhattisgarh AI Mission as per approval from GC
Implementation	Nodal Departments through Schools, ITIs, Colleges
Training	Empaneled partner

7.1 School Level

AI awareness and foundational learning programmes may be implemented using a cluster-based approach covering government schools.

Implementation Steps

1. Identification of pilot schools in each district for initial rollout.
2. Establishment of AI Clubs and Innovation Labs in selected schools.
3. Development of AI literacy modules aligned with school curriculum.
4. Training of teachers as AI facilitators through structured capacity-building programmes.
5. Deploying AI Teachers in the school where the teachers are not available.
6. Organisation of district and state-level AI hackathons and innovation challenges.

The programme will emphasize hands-on project-based learning using AI platforms, and digital tools.

The Department will prepare a detailed strategy document along with requisite budget for school-level AI programs and submit the same for approval. It would be incorporated, as approved in the Annual Plan of Operations.

Department may propose a subsidy plan (not 100%) for the SC/ST/EWS students for undertaking the training courses. Department may provide subsidy from their funds or Mission may provide Viable gap Funding.

7.2 Colleges and Universities

AI capacity building for college students will focus on skill development, applied research, and innovation-driven learning.

Department may propose a subsidy plan (not 100%) for the SC/ST/EWS students for undertaking the training courses. Department may provide subsidy from their funds or Mission may provide Viable gap Funding.

Implementation Steps

1. Introduction of AI certification courses in collaboration with academic and industry partners.
2. Integration of AI modules into undergraduate and postgraduate curricula.
3. Establishment of AI Innovation Cells in universities and colleges.
4. Facilitation of industry internships and live AI projects.
5. Provision of project grants for student-led AI innovations.

7.3 ITIs and Polytechnics

AI skill development programmes in ITIs may focus on Industry technologies and AI-enabled industrial automation.

Department may propose a subsidy plan (not 100%) for the SC/ST/EWS students for undertaking the training courses. Department may provide subsidy from their funds or Mission may provide Viable gap Funding.

Implementation Steps

1. Development of AI-enabled training modules for relevant trades.
2. Establishment of AI Labs equipped with AI and automation tools through private partners
3. Training of instructors through Training of Trainers (ToT) programmes.
4. Industry partnerships for product development, apprenticeships and practical exposure.
5. Integration of predictive maintenance and smart manufacturing applications.

7.4 Technical Education and Research Institutions

Professional institutions will focus on advanced AI research and development of sectoral AI applications.

Implementation Steps

1. Establishment of AI Centres of Excellence.
2. Industry partnerships for product development
3. Promotion of AI research programmes in priority sectors.
4. Provision of research grants and fellowships.
5. Integration with startup incubation ecosystems.

7.5 Faculty and Trainer Development

A comprehensive capacity-building program may be implemented for educators through:

- Faculty Development Programs (FDPs)
- AI certification courses
- Training of master trainers
- Online and hybrid training models

These programs may be conducted in collaboration with leading academic institutions and technology companies.

7.6 Infrastructure Development

The following infrastructure may be developed to support AI learning and research:

- AI labs in schools and technical institutions through Govt. of India/ State funds or through private partners

- Cloud-based AI platforms
- Access to datasets and AI development tools
- Innovation labs and incubation centres
- High-performance computing infrastructure for research institutions

Chapter 2: Enabling AI Innovation and Startup Ecosystem

The objective of this component under the Chhattisgarh AI Mission is to establish a robust, inclusive and demand-driven ecosystem for Artificial Intelligence innovation, entrepreneurship and applied research in the State. The component aims to create an enabling environment in which startups, researchers, academic institutions, MSMEs, industry partners and government departments can collaboratively develop, test, validate and scale AI-based solutions for governance, economic development and societal benefit.

Activities

Under this component, the following major activities may be undertaken:

1. Establishment of AI Data Labs

AI Data Labs may be established in selected Government institutions including ITIs, Polytechnics, Engineering colleges, Universities and other Public Institutions engaged in technical education, skilling and higher education. These labs may function as shared platforms for hands-on exposure, experimentation, pre-proof-of-concept development and innovation support. The labs may provide access to AI tools, development environments, relevant datasets and guided technical support for students, innovators and startups. As envisaged in the concept note, such labs may serve the three-fold purpose of skilling, pre-PoC development and innovation/incubation support.

2. Establishment of AI Centres of Excellence

The Mission may facilitate the establishment of AI Centres of Excellence in collaboration with academia, industry and other strategic institutions. These CoEs may function as central hubs for research, innovation, startup support, technical validation and ecosystem coordination. The CoEs may focus on applied and responsible AI innovation relevant to the State's developmental priorities and sectoral needs. They may also host incubation facilities and provide selective, criteria-based access to startups and innovators for use of advanced infrastructure and expert support.

3. Startup Incubation and Acceleration Support

A structured incubation and acceleration framework may be established under the Mission to support AI startups at idea, pre-seed and early-growth stages. This may include startup cohort-based support, business and technology mentoring, product strategy guidance, legal and regulatory handholding, responsible AI compliance support, market-readiness assistance and investor connect opportunities. Student-led, faculty-led and independent startups may be included under this support framework. These programmes may be done in collaboration with NIPUN mission.

4. Challenge-Based Innovation Programmes

The Mission may promote challenge-based innovation by identifying and publishing departmental AI problem statements from sectors such as agriculture, health, education, forestry, urban governance, skill development and public service delivery. Based on such problem statements, the Mission may organize AI hackathons, innovation challenges, grand challenges, thematic calls and innovation competitions to attract solutions from startups, academic teams, MSMEs and innovators. Shortlisted solutions may be supported for prototype development, pre-PoC validation and pilot testing. These programmes may be done in collaboration with NIPUN mission.

5. State AI Sandbox for Testing and Validation

A State AI Sandbox may be established to provide a controlled environment for testing and validating AI solutions in real or near-real conditions. This may enable startups and innovators to test their solutions against predefined protocols relating to privacy, data governance, security, performance and usability. The sandbox framework may facilitate comparison of multiple solutions before scale-up and may provide a credible mechanism for pilot-based evidence generation.

6. Innovation Grants and Incentive Support

The Mission may create targeted support instruments such as pre-PoC grants, pilot grants, innovation awards, cloud and compute credits, subsidized infrastructure access and support for prototyping and field validation. Such support may help reduce entry barriers for AI startups and innovators and may enable progression from concept to validated deployable solution.

7. Applied Research and Academic Collaboration

The component may encourage applied AI research through partnerships among universities, technical institutions, CoEs, industry and government departments. Research under this component may be aligned to real-world applications and public problem statements. Institutions may be supported to undertake algorithm development, model validation, data annotation, domain-specific research and responsible AI testing. Faculty-led innovation and technology transfer may also be encouraged.

Institutional Mechanism

The implementation of this component may be undertaken through a structured institutional framework under the Chhattisgarh AI Mission.

1. Role of Mission Directorate

The Mission Directorate may provide overall strategic direction, inter-departmental coordination, policy guidance, programme supervision and approval support. It may facilitate convergence among departments, institutions, startups, incubators and private sector partners and may monitor progress of this chapter.

The Mission Directorate may empanel private partners for establishing and running Data Labs end to end through tendering process.

2. Role of Governing Council

The Governing Council under the Mission may approve the overall policy direction, priority sectors, programme design, financial support mechanisms, institutional partnerships and scale-up framework for this chapter.

3. Role of Technical Advisory Committee

The Technical Advisory Committee will advise on problem statement prioritization, innovation programme design, startup selection, sandbox evaluation, pilot review and ecosystem strengthening.

4. Role of Nodal Implementing Agency

The 36 Inc may be designated as nodal agency for day-to-day implementation of this component, including management of startup calls, grant administration, partner onboarding, challenge programmes, incubation support, pilot coordination and reporting.

5. Role of Host Institutions, CoEs and Incubation Partners

Selected host institutions may operationalize AI Data Labs and incubation support mechanisms at the institutional level. AI Centres of Excellence may provide advanced technical support, applied research leadership and startup ecosystem services. External incubators, accelerators and knowledge partners may be engaged as implementation partners wherever required.

Implementation Strategy

The implementation of this component may be undertaken in a phased and structured manner.

1. Phase I: Planning and Ecosystem Design

In the initial phase, the Mission may identify priority sectors, map existing institutional capacities, select host institutions for AI Data Labs and CoEs aligned with India AI mission, develop

programme guidelines and establish governance mechanisms. Standard operating procedures may be framed for startup support, innovation challenge administration, sandbox usage, pilot evaluation and grant management.

2. Phase II: Infrastructure and Programme Operationalization

In this phase, AI Data Labs and CoEs may be operationalized in selected institutions. Startup incubation framework, mentorship pool, challenge mechanisms, innovation support windows and departmental problem statement collection systems may be activated. The State AI Sandbox may also be established during this phase.

3. Phase III: Startup Support, Piloting and Validation

Once institutional mechanisms are operational, the Mission may launch startup cohorts, challenge-based calls, pre-PoC grants and pilot support schemes. Selected startups and innovators may be supported for prototype refinement, departmental engagement, sandbox testing and field-level validation. Departments may provide domain support and deployment environments for solution testing.

4. Phase IV: Scale-up, Adoption and Ecosystem Consolidation

Solutions that demonstrate technical viability, public value and deployment readiness may be considered for broader adoption through empanelment, departmental onboarding or structured procurement support. Lessons from pilots may be documented and successful models may be replicated across sectors and geographies within the State. The innovation ecosystem may thereafter be strengthened through investor engagement, industry partnerships and national-level linkages.

Chapter 3: AI Awareness, Outreach, and Ecosystem Engagement

The objective of this component is to build broad-based awareness, understanding, and participation in Artificial Intelligence across the State of Chhattisgarh. The chapter seeks to position AI not only as a technology domain, but as an enabling instrument for governance, service delivery, innovation, entrepreneurship, skilling, and inclusive development. It aims to ensure that knowledge of AI, access to AI opportunities, and participation in AI-led initiatives are not confined to a limited set of institutions or urban centres, but are extended across districts, educational institutions, public systems, startups, industry, women, youth, tribal communities, and other underserved groups.

Activities

Under this component, the Chhattisgarh AI Mission may undertake the following activities:

1. State-wide AI Awareness and IEC Campaigns

A structured Information, Education and Communication (IEC) campaign may be undertaken to build awareness regarding the concept of AI, its practical applications, opportunities for education and livelihoods, public service use-cases, and principles of responsible AI. Awareness content may be disseminated through print, digital, audio-visual, and community-based channels, including schools, colleges, district offices, Common Service Centres, Panchayats, and urban local bodies. Content may be developed in simple Hindi and, wherever necessary, in local and tribal language formats.

2. AI Knowledge Series, Public Lectures, and Thematic Workshops

The Mission may facilitate organization of expert lectures, public seminars, thematic workshops, webinars, and orientation sessions across educational institutions and public systems. These may cover foundational awareness as well as sector-specific themes such as AI in agriculture, healthcare, education, public administration, livelihoods, and governance. Sessions on ethical AI, data protection, public trust, and responsible use of AI may also be included.

3. AI Conferences, Summits, Symposiums, and Outreach Events

Support may be provided, as per Mission directives, for organization of AI-related conferences, symposiums, conclaves, innovation festivals, and outreach events at the State, regional, and institutional level. Such platforms may serve as forums for knowledge exchange, stakeholder participation, innovation showcase, and policy dialogue. Selected support may also be extended for participation in national and international AI events, in order to expose institutions and innovators from Chhattisgarh to emerging trends, best practices, and global standards.

4. Hackathons, Innovation Challenges, and Community Competitions

Challenge-based participation mechanisms may be introduced to encourage practical innovation and problem-solving around AI. These may include state-level hackathons, department-led innovation challenges, student competitions, prototype development contests, and thematic problem statement events linked to governance and developmental priorities of the State. These activities may also act as pipeline-building mechanisms for future pilots, startup engagement, and institutional innovation support.

5. Mentorship and Networking Programmes

A structured mentorship and networking programme may be established under the Mission to support students, researchers, startups, and early-stage innovators. A pool of mentors comprising industry experts, AI researchers, startup founders, domain specialists, product leaders, and MSME representatives may be empanelled for this purpose. The Mission may facilitate mentoring sessions, expert clinics, networking forums, and interactive platforms that enable participants to obtain guidance, domain insights, and practical support for AI-led initiatives.

6. Industry–Academia–Government Engagement Platforms

The Mission may organize structured interaction platforms to connect educational institutions, research bodies, government departments, startups, and industry stakeholders. These may include industry-academia connect sessions, departmental consultations, applied research discussions, problem statement workshops, and sector-focused interaction forums. Such engagements may help align academic work with practical needs, encourage collaborative innovation, and improve pathways for real-world AI adoption in the State.

7. Digital Knowledge and Outreach Platform

A digital platform may be developed under the Mission to act as a central repository and engagement interface for AI-related information. The platform may host awareness material, event information, expert lectures, case studies, best practices, publications, mentorship opportunities, innovation challenges, and updates on Mission activities. It may also serve as a platform for registrations, stakeholder networking, resource access, and dissemination of newsletters and outreach content.

8. Documentation and Dissemination of Success Stories

The Mission may identify, document, and disseminate successful AI use-cases, innovations, pilots, and institutional initiatives from within Chhattisgarh and from other relevant ecosystems. These may be presented in the form of case studies, reports, short films, compendiums, and

public showcases. Such documentation will help build awareness, create demonstration effect, and encourage wider participation in AI-related initiatives.

9. District and Community-level Outreach

District-level and grassroots outreach activities may be undertaken to ensure that AI awareness is not confined to major urban centres. The Mission may support district awareness camps, block-level orientation programmes, Panchayat-level sensitization, institutional outreach drives, and community engagement sessions through local educational institutions, civil society organizations, youth platforms, self-help groups, and frontline institutions.

10. Inclusive Outreach for Tribal and Marginalized Communities

Special outreach interventions may be designed for tribal and marginalized communities to ensure that AI becomes a tool of inclusion rather than exclusion. The Mission may promote awareness in simple, locally understandable formats and may support demonstration of AI-enabled services related to entitlements, health, grievance redressal, and citizen access. Tribal youth and women may be engaged as local facilitators and digital ambassadors to strengthen trust and last-mile outreach.

11. Women and SHG-focused AI Outreach

Dedicated efforts may be made to build awareness among women and Women Self-Help Groups regarding AI-enabled opportunities in service access, digital inclusion, financial empowerment, skilling, livelihoods, and enterprise development. Outreach programmes for women may be designed in an accessible and practical manner, with emphasis on voice-enabled systems, localized content, digital confidence-building, and community-based delivery models.

Institutional Mechanism

1. Role of Mission Directorate

The implementation of this component may be anchored by the **Chhattisgarh AI Mission Directorate**, which may provide overall policy direction, coordination, planning, approval, and monitoring. The Directorate may work in convergence with relevant Departments of the State Government, educational institutions, technical bodies, district administrations, industry associations, incubators, and ecosystem partners.

2. Role of Directorate of Public Relations

For operational purposes, the Mission may entrust Directorate of Public Relations for an **AI Awareness, Outreach and Ecosystem Engagement**. The DPR will be responsible for preparation

of annual outreach plans, stakeholder engagement, communication design, event coordination, district-level outreach support, partnership development, and reporting of progress.

A multi-stakeholder advisory group may be constituted under the Mission anchored by DPR to provide guidance for this component. The group may include representatives from Government Departments, academia, industry, startups, media, civil society, and domain experts.

The group may function in an advisory capacity and may support the Mission by:

- recommending priorities,
- reviewing outreach and engagement approaches,
- identifying collaboration opportunities,
- and facilitating alignment across stakeholders within the ecosystem.

3. Role of District Administration

At the district level, District Administration or DeGS may support local planning and execution of awareness and outreach activities. Suitable nodal officers or institutional coordinators may be identified for district and institutional engagement.

Implementation Strategy

The implementation strategy for this component may be based on a phased, partnership-based, and inclusion-oriented approach.

1. Phased Implementation

In the initial phase, the Mission may focus on baseline stakeholder mapping, preparation of outreach strategy, development of IEC toolkits, establishment of digital channels, and launch of foundational awareness campaigns. In the subsequent phase, the Mission may scale institutional engagement, district-level outreach, hackathons, lecture series, and mentorship platforms. In the later phase, emphasis may be placed on consolidation through annual flagship events, policy dialogues, documentation of impact, and sustained ecosystem partnerships.

2. Partnership-based Delivery

Implementation may be undertaken through collaboration with academic institutions, technical universities, colleges, ITIs, polytechnics, incubators, Centres of Excellence, industry bodies, startups, civil society organizations, women's collectives, and local institutions. Government Departments may support sector-specific outreach themes and problem statements, while industry and academic partners may contribute expertise, mentorship, and knowledge platforms.

3. Communication and Outreach Design

A comprehensive communication strategy may be adopted under the Mission, with differentiated content for students, educators, public officials, researchers, entrepreneurs, women, tribal communities, and the general public. The strategy may make use of digital media, community outreach, institution-based dissemination, radio, local campaigns, and public events. The communication approach may emphasize clarity, practical relevance, inclusiveness, and responsible AI messaging.

4. Resource Support and Standardization

The Mission may empanel knowledge partners, communication agencies, event support agencies, technical institutions, and outreach partners for implementation support. Standardized templates, outreach toolkits, reporting formats, event guidelines, and documentation protocols may be developed to ensure consistency and quality across activities.

5. Monitoring and Review

A suitable monitoring framework may be adopted for tracking outreach coverage, quality, stakeholder participation, and ecosystem outcomes. Periodic review may be undertaken by the Mission Directorate on the basis of approved indicators such as number of districts covered, number of awareness events conducted, number of institutions engaged, number of participants reached, number of mentors empanelled, representation of women and tribal communities, and number of innovation and networking activities organized.

Chapter 4: Secure and Responsible Artificial Intelligence Infrastructure

The objective of this chapter is to establish a secure, lawful, ethical, transparent, and trustworthy framework for the adoption, development, procurement, deployment, and use of Artificial Intelligence systems under the Chhattisgarh AI Mission. The chapter seeks to ensure that AI-enabled systems protect citizen rights, safeguard personal and sensitive data, uphold accountability in public decision-making, and build public confidence in technology-led governance, while enabling innovation in a responsible and enabling manner.

Activities

Under this component, the Chhattisgarh AI Mission may undertake the following activities:

1. Development of a State-level Operational Framework for Secure and Responsible AI

The Mission may develop a State-level operational framework to guide the adoption of secure and responsible AI practices in government-supported systems. This framework may be aligned with applicable national laws, guidelines, advisories, and best practices, and may provide practical guidance for departments, agencies, institutions, and implementation partners.

2. Alignment with Government of India Frameworks

All AI initiatives supported under the Mission may be aligned with relevant national legal and policy frameworks, including the Digital Personal Data Protection Act, 2023, advisories and guidance issued by the Ministry of Electronics and Information Technology, national frameworks under the IndiaAI Mission, and any other applicable standards, industrial policy provisions, or central guidance. The Mission may support departments and partners in interpreting and operationalizing these requirements in the State context.

3. Data Governance and Privacy Safeguards

The Mission may support the development of institutional processes and standard protocols for lawful, secure, and appropriate handling of data used in AI systems. These may include provisions relating to data access, purpose limitation, minimization, anonymization, retention, sharing, security controls, and privacy review. The aim may be to ensure that the use of data in AI systems is proportionate, compliant, and respectful of citizen rights.

4. Security-by-Design Measures for AI Systems

The Mission may promote security-by-design principles in the lifecycle of AI systems supported under the Mission. This may include baseline cybersecurity requirements, secure deployment practices, access controls, logging, encryption, monitoring arrangements, vulnerability testing, and safeguards for third-party tools, platforms, datasets, and cloud-based environments. AI

infrastructure may be designed and operated in a manner that reduces risks of misuse, compromise, service disruption, or unauthorized access.

5. Monitoring, Review, and Compliance Checks

Appropriate monitoring arrangements may be established to review compliance with security, privacy, transparency, and responsible AI requirements. AI systems supported under the Mission may be subject to periodic compliance reviews, risk checks, audit processes, and corrective action mechanisms. The findings of such reviews may be used to inform improvement, risk mitigation, and stronger institutional controls.

6. Capacity Building for Secure and Responsible AI Adoption

Capacity building efforts may be undertaken for Government Departments, implementing agencies, technical teams, procurement officials, and ecosystem partners to enable them to understand and implement secure and responsible AI requirements. Training programmes, workshops, manuals, checklists, and advisory support may be provided on matters such as privacy compliance, cybersecurity, ethical review, transparency, and procurement safeguards.

7. Departmental Advisory and Handholding Support

The Mission may provide advisory support to departments and institutions in the design, review, and deployment of AI systems. This support may include assistance in applying standard templates, conducting preliminary risk screening, aligning proposals with responsible AI requirements, and improving deployment readiness through review and feedback.

Institutional Mechanism

1. Role of Mission Directorate

The implementation of this component may be anchored by the **Chhattisgarh AI Mission Directorate**, which may provide overall policy direction, coordination, review, and monitoring for secure and responsible AI adoption under the Mission. The Directorate may work in coordination with concerned departments, information technology-related agencies, legal and policy units, cybersecurity stakeholders, technical institutions, and authorized implementation partners.

2. Role of State CERT

A State CERT will be set up for providing security audit of AI solutions being implemented in the departments. It will partner with the Security Audit Agencies operating at National Level. State CERT may also provide service to private sector. Services would be provide on chargeable basis to both government and private sectors. However, forensics part will not be in the scope of State CERT.

3. Role of Technical Advisory Committee

The **Technical Advisory Committee** will provide guidance and oversight for sensitive, high-impact, or citizen-facing AI systems. Such a committee may include representatives from government, technology, law, data governance, cybersecurity, academia, and domain experts, as appropriate. Its role may include review of proposals, guidance on ethical and security safeguards, assessment of risks, and recommendation of mitigation or corrective measures.

4. Role of Departments

Departments implementing AI initiatives may designate nodal officers or authorized officials to coordinate compliance, documentation, reporting, and interaction with the Mission Directorate and review mechanisms. This may help ensure that responsible AI processes are embedded within departmental implementation structures and are not treated as isolated or external requirements.

Implementation Strategy

The implementation strategy for this component may be based on a phased, risk-based, and standards-aligned approach.

1. Phased Implementation

In the initial phase, the Mission may focus on establishing foundational readiness through preparation of frameworks, templates, model clauses, and review mechanisms, along with awareness and training for concerned departments and partners. In the next phase, these safeguards may be integrated into ongoing and new AI initiatives, including project review, deployment readiness, procurement safeguards, and departmental compliance support. In the later phase, the focus may shift toward consolidation, periodic review, audit strengthening, continuous improvement, and institutionalization of responsible AI processes across the Mission ecosystem.

2. Risk-based Review Model

The Mission may adopt a differentiated review model based on the nature and impact of the AI system. Low-risk systems may be subjected to basic compliance and security checks, while moderate-risk systems may require structured documentation and review. High-impact, sensitive, or citizen-facing systems may require detailed ethical assessment, stronger transparency provisions, human oversight arrangements, audit readiness, and periodic monitoring. This approach may help balance innovation enablement with appropriate safeguards.

3. Standardization and Toolkits

To ensure consistency and ease of adoption, the Mission may develop and issue standard formats, checklists, guidance notes, templates, and toolkits for use by departments and implementation agencies. These may include responsible AI checklists, privacy screening tools, risk assessment templates, vendor due diligence formats, procurement safeguard clauses, incident reporting formats, and monitoring templates.

4. Departmental and Partner Support

The Mission may support departments and partner institutions through handholding, orientation, review assistance, and advisory services. This may be especially important for departments that are at an early stage of AI adoption and may require support in understanding legal, ethical, and operational safeguards. Partner institutions and vendors may also be oriented on compliance expectations and implementation standards.

5. Monitoring and Periodic Review

A suitable monitoring framework may be adopted for this component. Progress may be tracked on indicators such as number of AI systems reviewed, number of departments adopting responsible AI processes, number of security and privacy assessments completed, number of trainings conducted, number of compliance issues identified and resolved, and extent of safeguard clauses integrated in procurement and implementation arrangements. Periodic review may be undertaken by the Mission Directorate and, where necessary, critical issues may be escalated to the competent authority.

Chapter 5: Strengthening AI-Enabled Governance

The objective of this chapter is to enable the systematic adoption of Artificial Intelligence across core governance and administrative functions of the Government of Chhattisgarh in order to improve decision-making, operational efficiency, evidence-based administration, and citizen-centric service delivery. The chapter seeks to support a gradual transition from manual, siloed, and reactive systems towards data-driven, predictive, and intelligent governance mechanisms that are aligned with public priorities and administrative needs.

Activities

Under this component, the Chhattisgarh AI Mission may undertake the following activities:

1. Department-wise AI Use-case Identification and Assessment

The Mission may support structured studies and departmental assessments to identify suitable AI use-cases across government functions. These studies may focus on governance pain points, decision-support requirements, repetitive workflows, analytical opportunities, and citizen service gaps, and may provide recommendations for priority AI interventions. Benchmarking of best practices and comparable implementations may also be undertaken to support informed adoption.

2. Preparation of Departmental AI Adoption Roadmaps

Based on the findings of structured assessments, departmental AI adoption roadmaps may be prepared. These roadmaps may identify short-term, medium-term, and long-term opportunities for AI integration, specify pilot and scale-up pathways, and align AI interventions with departmental mandates, reform priorities, and service delivery objectives.

3. Establishment of Departmental AI Nodal Mechanism

Departments may designate AI nodal officers or internal coordination arrangements to facilitate implementation, capacity building, reporting, and coordination with the Mission Directorate. These nodal mechanisms may help institutionalize AI adoption within departmental structures and improve ownership of AI initiatives.

4. Development of Government Generative AI Use Standards

A standard for the use of Generative AI within government may be developed and issued under the Mission. This may include guidance on permissible and non-permissible uses, disclosure and review requirements, human oversight, authenticity safeguards, deepfake-related precautions, and use of generative systems in internal government productivity and external communication contexts.

5. AI Decision Support in Priority Departments

The Mission may facilitate AI-based decision support systems to improve Public Service Delivery in priority sectors and departments, including but not limited to Health, School Education, Higher Education, Agriculture, Forest, Revenue, Rural Development, Urban Administration, Transport, and Industries. These systems may support predictive planning, performance monitoring, targeting of interventions, resource allocation, and better operational decision-making.

6. Integration of BHASHINI and Multilingual AI in Citizen Services

The Mission may support integration of BHASHINI-based or similar multilingual AI capabilities into citizen-facing services such as portals, chat interfaces, IVR systems, helpdesks, and communication platforms. This may help improve accessibility of digital services through speech, translation, and local-language interaction, especially for citizens using Hindi and regional or tribal language contexts.

7. Forest AI Stack for the Forest Department

A dedicated Forest AI Stack may be established for the Forest Department, Chhattisgarh, as a priority use-case under this component. This may include establishment of a State Forest Data Lake integrating forest fire history, near-real-time alerts, satellite imagery, forest boundaries, corridors, human-wildlife conflict incident data, and camera trap or sensor metadata. AI use-cases under this stack may include forest fire intelligence, wildlife movement prediction, village-level warning alerts, illegal logging and poaching detection, and forest change or encroachment monitoring. Inter-departmental integration may also be facilitated with agencies such as Railways, Energy, Police, and Disaster Management authorities for coordinated response and prevention.

8. Review of Departmental AI Adoption

Departmental AI adoption and progress may be reviewed on a half-yearly and annual basis. Such reviews may help assess the status of implementation, identify bottlenecks, capture lessons learned, prioritize future actions, and support course correction under the Mission.

Institutional Mechanism

1. Role of Mission Directorate

The implementation of this component may be anchored by the **Chhattisgarh AI Mission Directorate**, which may provide overall direction, coordination, prioritization, review, and monitoring for AI adoption across government departments. The Mission Directorate may work in coordination with line departments, the State's information technology and e-Governance institutions, training institutions, technical partners, and approved knowledge providers. Mission

Directorate will help departments to identify the possible AI applications and would provide on demand for the AI implementations in the department. Mission Directorate will keep a repository of AI applications.

Mission Directorate through CHIPS will empanel the technical agencies for the providing resources for AI/ML for the development of AI based solution in the departments. The departments will be responsible for the development of the application. CHIPS would provide the technical support.

2. Role of Technical Advisory Committee

The **Technical Advisory Committee** will guide the prioritization and review of departmental AI use-cases, recommend standards for AI-enabled governance, support interoperability with digital systems, and ensure alignment with secure and responsible AI requirements. The group may include representatives from relevant government departments, technical institutions, digital governance bodies, and subject-matter experts.

3. Role of Departments

Each participating department may designate an **AI Nodal Officer** or establish an internal coordination mechanism to support implementation, ensure departmental ownership, maintain records of AI initiatives, coordinate capacity-building activities, and report progress to the Mission Directorate. Departments may get the baseline assessment done for their readiness to adopt the AI interventions.

Implementation Strategy

The implementation strategy for this component may be based on a phased, structured, and department-driven approach.

1. Phased Implementation

In the initial phase, the Mission may focus on structured assessments, use-case identification, departmental readiness analysis, standards development, and preparation of training and adoption plans. In the next phase, selected departments may undertake pilot deployment of productivity tools, copilots, multilingual citizen service integrations, and AI decision-support systems in identified priority areas. In the later phase, successful use-cases may be scaled up, periodic reviews institutionalized, and AI adoption embedded into routine departmental workflows and governance systems.

2. Department-driven Adoption Model

AI adoption under this component may be department-driven and based on governance priorities. Departments may be encouraged to identify high-value use-cases linked to their mandates, administrative reform needs, service delivery objectives, and field-level challenges. The Mission may provide advisory, technical, and coordination support to enable such adoption in a structured and consistent manner.

3. Alignment with Existing Digital Governance Systems

All AI initiatives under this component may, to the extent feasible, be aligned with and integrated into existing digital governance and e-Governance systems of the State. AI solutions may complement current applications, databases, service delivery systems, and administrative workflows, so that implementation remains interoperable, scalable, and sustainable. AI adoption may therefore be treated as a layer of enhancement to digital governance systems rather than as a standalone parallel system.

4. Standards, Guardrails, and Responsible Use

All AI systems and tools introduced under this component may be subject to applicable standards, safeguards, security controls, and responsible use requirements. Special care may be taken in relation to Generative AI, citizen-facing systems, multilingual interfaces, and AI-assisted decision-support tools, so that use remains transparent, reviewable, and appropriately supervised by human authorities.

5. Monitoring, Review, and Course Correction

A suitable monitoring framework may be adopted under this component to track departmental adoption, readiness, training coverage, tool deployment, and functional outcomes. Half-yearly and annual reviews may be undertaken to assess progress, identify implementation challenges, revise priorities, and support course correction. Indicators may include number of departments assessed, number of roadmaps prepared, number of officials trained, number of AI tools deployed, number of departmental use-cases operationalized, and progress of priority systems such as multilingual citizen service integration and the Forest AI Stack.

5. Governance Structure

Three-Tier Governance Framework

Establishment of Chhattisgarh AI Mission (CG-AIM)

The **Chhattisgarh State Artificial Intelligence Mission (CG-AIM)** may be the State's **flagship, mission-mode programme** to accelerate the **development, adoption, and responsible use of Artificial Intelligence** across governance, industry, education, and public welfare.

CG-AIM may function as an **umbrella mission**, integrating and coordinating all AI-related initiatives of the State, including **Centres of Excellence (CoEs), AI Parks, AI Sandbox ecosystem, startup enablement programs, data governance frameworks, and Responsible AI mechanisms**, under a single, unified institutional framework.

To ensure effective leadership, accountability, and execution, CG-AIM may operate through a **Three-Tier Governance Structure** comprising:

- A **CM-led Governing Body** (Policy & Strategic Oversight)
- A **CS-led Steering Committee** (Executive & Inter-Departmental Coordination)
- A **Mission Directorate** headed by a Mission Director (Implementation & Operations)

Tier-I: CM-Led Governing Body (Apex Policy & Strategic Body)

Role and Responsibilities of the Governing Body

The Governing Body may function as the **highest policy-making and oversight authority** for CG-AIM and may be responsible for:

- Approving the **overall AI Mission strategy**, vision, and long-term direction
- Approving the delegation of the financial, power, expenditure approval and payments powers to Mission Directorate.
- Approving the **annual and multi-year budget** of the Mission
- Approving the activities to be undertaken by Private NGOs and Trusts on nomination basis as per specific or general approval.
- Approving the Work Closure Report format

- Approving major **policy changes and strategic interventions** under CG-AIM
- Ensuring alignment of CG-AIM with the **IndiaAI Mission and National digital policies**
- Providing political and strategic guidance to ensure whole-of-government adoption

Tier-II: CS-Led Steering Committee (Executive & Coordination Body)

Role and Responsibilities of the Steering Committee

The Steering Committee may act as the **apex executive body** for CG-AIM and may be responsible for **translating policy decisions into actionable programs** and ensuring inter-departmental coordination.

Key responsibilities include:

- Approving the **Annual Work Plan for AI Mission** and sector-wise priorities
- Approval of unit cost proposed by Mission Directorate in the Annual Work Plan.
- Approval of the implementing agency in the Annual Work Plan.
- Approving major **collaborations with industry, academia, and universities**
- Reviewing progress of **AI adoption across departments**
- Approving **annual budgets and utilization plans** based on the Annual Plan of Operations
- Monitoring **mission outcomes and performance indicators**
- Publishing the **Annual “State of AI in Chhattisgarh” Report**
- Monitoring **annual KPIs and overall AI readiness of the State**
- May ensure coordinated AI implementation and standardisation of data across all State departments.

Tier-III: Mission Directorate & Implementing Agency (Operational Body)

Mission Directorate

A **Mission Directorate** under the Chhattisgarh AI Mission (CG-AIM) will be established and headed by the **CEO, CHIPS**, who shall serve ex-officio as the **Mission Director**.

Role and Responsibilities of the Mission Directorate

The Mission Directorate may be the **core operational arm** of CG-AIM and may be responsible for implementation of all the policies and programs of the Mission. Mission Directorate establishment expenditure (Administrative and Contingency) to be capped to max 3%. Mission Directorate may have staff from Regular and Contract employment. The recruitment rules would be decided by the Department of E&IT. A PMU would be set up for assisting Mission Directorate for implementation of AI Mission.

Mission Directorate responsibilities include:

1. Formulate the **vision, objectives, strategy and roadmap** of the Mission in alignment with the **State Development Agenda, Budget announcements, and applicable Central/State schemes**.
2. Prepare and periodically revise the **Mission Implementation Framework, Annual Work Plans (AWPs)**, propose name of Implementing Agencies in AWP and outcome targets.
3. Identify priority sectors, programmes and interventions to be taken up under the Mission.
4. Empanel the AI/ ML agencies to provide resources. Empanel the agencies for providing training and setting up of Data Labs.
5. Prepare the **Mission budget, supplementary demands, re-appropriation proposals and utilisation plans**.
6. Mission Directorate will do the suitable analysis for defining unit cost in the Annual Work Plan.
7. Accord **in-principle approval / administrative approval**, as per delegated powers, or submit proposals for approval of the competent authority.
8. Release funds to implementing agencies as per approved guidelines and milestones. Funds release distribution would be in the ratio of 40:40:20. Funds would be released after submission of utilization certificate of 80% of funds. Last Installment of 20% would be released after Physical completion of work
9. Monitor **utilisation of funds**, ensure timely submission of **Utilisation Certificates (UCs)** and compliance with audit requirements.
10. Format for Work Closure Report will be proposed by Mission Directorate.
11. Facilitate convergence of funds from **State, Central, externally aided projects, CSR and other permissible sources**
12. Issue **guidelines, SOPs, advisories and clarifications** from time to time for effective implementation of the Mission.

13. Examine, appraise and place before the competent authority **project proposals, pilot initiatives and implementation plans** received from Departments / Agencies.
14. Develop **Key Performance Indicators (KPIs), milestones and outcome indicators** for the Mission.
15. Commission third-party evaluations, audits and impact assessments. 3rd Party Audit expenditure to be capped to max 0.5%. Audit would be done on Annual basis and for overall scheme.

Technical Advisory Committee (Academician-Led)

Role of the Technical Advisory Committee

The Technical Advisory Committee may function as the **knowledge and standards authority** for CG-AIM and may:

- Guide **AI technical standards and architectures**
- Recommend **research priorities and academic collaborations**
- Support **technical evaluation of AI initiatives and CoEs**
- Advise on **Responsible AI practices, ethics, and safety**
- Ensure that AI adoption under CG-AIM remains **technically sound, future-ready, and Nationally aligned**

Annexure - I : Composition of Administrative bodies

6. Financial Framework

5- Year budget

S. No.	Items	Year-1	Year-2	Year-3	Year-4	Year-5	Total (Rs. In Cr)	Remarks
CAPEX								
1	AI Data Labs	20	30	30	10	10	100	@ Rs. 1 Cr per Lab for 100 Labs Rates taken as per India AI lab for ITIs
2	CoE (CoE will act as Hub for Data Labs)	20	30	30	10	10	100	@ Rs. 20 Cr per CoE for 5 CoEs at Division HQ as Hub and Spoke Model Rates taken as per India AI CoE Colleges / Private Universities can become a partner and invest in opening CoE
	Total (A)	40	60	60	20	10	200	
OPEX								
1	State AI Centre for Innovation and Mission Directorate		2.5	2.5	2.5	2.5	10	Opex for State AI Centre for Innovation
2	Training at School, College and Govt. Institutions, Certifications and Training Material	10	10	10	10	10	50	Training cost for support training of 6 Lakh students, Rs. 1500 per students for 5 years
3	Govt. employees training	3	3	3	3	3	15	Training cost for training of 1.5 Lakh govt. employees
4	R&D Grants, Chairs & Fellowships	5	5	5	5	5	25	Research and Datasets for innovation for 10% of institutes in CG
5	Language Datasets & BHASHINI Integration	5	5	5	5	5	25	50+ Datasets, LLM, BHASHINI in top-10 services
6a	Startup funding as per State startup policy	5	5	5	5	5	25	Support for Startup / Innovation for 1000+ PoCs
6b	Seed funding/ Equity/ Accelerator Program grant	5	5	5	5	5	25	
7a	India AI Cloud Compute	5	5	5	5	5	25	Subscription to cloud + compute credits for Government co-pilots, PoC/ Research & Development
7b	Private Cloud Compute	5	5	5	5	5	25	
8	Ecosystem events/ IEC	2	2	2	2	2	10	Yearly Hackathon/ Innovation Challenges Orientation Session,

								Mentorship Meetings, Awareness workshops, events, Industry-Academic Connects, Print and Digital Media campaign
9	PMU (Mission + Dept cells)	5	5	5	5	5	25	Overall Mission Execution, Coordination and Monitoring PMU for Mission Directorate and Department @ CHiPS Empanelment rate
10	Third-party Audits & Safety Evaluations		3	3	4	5	15	Third party audit from 2nd year@ CHIPS Empanelment Rates
11	AMC/Tool subscriptions		2	2	3	3	10	Recurring cost for the hardware and software
12	Administrative expenses	2	2	2	2	2	10	Administrative cost for the Mission
13	Contingency expenses	1	1	1	1	1	5	
	Total (B)	53	61	61	63	64	300	
	Total (A+B)	93	121	121	83	84	500	

7. Audit & Compliance

7.1. Performance Audit (Third Party Audit – TPA)

Overview

A **Performance Audit** may be conducted to evaluate whether CG-AIM has achieved its objectives **economically, efficiently, and effectively**, and whether it has delivered **measurable public value**.

A **Third Party Auditor (TPA)** may be engaged for this purpose.

- Audit would be done on Annual basis and for overall scheme.
- Support of **Rajya Niti Aayog** may be taken for engagement of the TPA

Coverage of Performance Audit

The performance audit may assess the following dimensions:

- Governance and institutional effectiveness
- Mission design and strategic alignment
- Financial performance and economy
- Implementation efficiency
- AI infrastructure and platforms
- Outcomes and effectiveness of AI use-cases
- Capacity building and human resources
- Ecosystem development and innovation outcomes
- Data governance, ethics, and legal compliance
- Monitoring, evaluation, and reporting mechanisms
- Sustainability and scalability of initiatives
- Overall impact assessment

The TPA may also:

- Identify gaps and implementation risks
- Recommend **mid-course corrections**
- Suggest improvements in governance, design, or execution

7.2. Data Protection, Responsible AI, and Legal Compliance

Overview

All AI systems and initiatives supported or deployed under CG-AIM may comply with applicable **legal, regulatory, and policy frameworks**, with particular emphasis on data protection and responsible AI.

Applicable Frameworks

- Digital Personal Data Protection (DPDP) Act, 2023
- National Data Governance Policy (NDGP)
- Guidelines issued by MeitY
- IndiaAI Mission frameworks
- Responsible AI (RAI) principles adopted by the State

Compliance Measures

- Lawful data collection and processing
- Purpose limitation and data minimization
- Anonymization and safeguards for sensitive data
- Transparency and accountability in AI decision-making
- Periodic compliance review of AI systems and vendors

7.3. Monitoring, Reporting, and Review Compliance

Overview

Monitoring and reporting mechanisms may ensure **continuous oversight and transparency** in Mission implementation.

Key Elements

- Periodic progress reports by the Mission Directorate
- Review of progress against **Annual Plan of Operations (APO)**
- KPI monitoring at Mission and chapter levels
- Reporting to the Steering Committee and Governing Body

8. Annual Work Plan (AWP)

This Mission Directorate will prepare Annual Work Plan and roadmap in phased manner and follow a structured implementation of the State Artificial Intelligence Mission over a 5-year horizon. It will be aligned with the State AI Policy vision and provides actionable steps, milestones, governance responsibilities, and required funds for each year.

Annual plan will be approved by the CS led Steering Committee. Changes in the AWP can be done Mission Directorate

Mission Directorate will do the suitable analysis for defining unit cost in the Annual Work Plan, it will be approved by the CS led Steering Committee

Activities can be proposed by the State Government and Central Government departments and institutions.

Activities defined in the mission or any other proposed activities will be implemented by the related departments. AWP will have the name of the implementing agency and it will be approved by CS led Steering Committee.

Implementing Agency will submit the work closure report.

9. Expected Outcomes

The Chhattisgarh State Artificial Intelligence Mission (CG-AIM) is designed to deliver **measurable, sustainable, and inclusive outcomes** by institutionalizing Artificial Intelligence as a core enabler of governance reform, capacity building, innovation, and socio-economic development in the State.

Through mission-mode implementation, CG-AIM will enable a transition from **manual, fragmented, and reactive systems** to **data-driven, predictive, and citizen-centric governance**, while simultaneously building a robust AI ecosystem supported by skilled human capital, research institutions, and startups.

9.1 Governance and Service Delivery

- AI-enabled decision support systems adopted across key government departments
- Improved efficiency, transparency, and responsiveness in public service delivery
- Faster grievance redressal and improved monitoring of schemes and programs
- Strengthened evidence-based policymaking through data analytics

9.2 Human Capital and Institutional Capacity

- Creation of a large pool of AI-skilled students, youth, researchers, and government employees
- Strengthening of public institutions as centres of AI education, training, and research
- Long-term institutional capacity through faculty chairs, fellowships, and research programs

9.3 Innovation, Research, and Startup Ecosystem

- Growth of AI startups and applied innovation aligned with governance and societal needs
- Operational AI Data Labs and Centres of Excellence in the State
- Enhanced collaboration between academia, industry, startups, and government
- Generation of employment opportunities in AI and emerging technology sectors

9.4 Social Inclusion and Sectoral Impact

- Deployment of AI solutions in priority sectors such as health, education, agriculture, tribal welfare, and public administration
- Improved access to services and opportunities through inclusive and participatory AI initiatives
- Broader engagement through AI conferences, workshops, hackathons, and mentorship programs

9.5 Responsible AI, Data Governance, and Trust

- Implementation of DPDP-compliant data governance frameworks
- Institutionalisation of Responsible AI principles across AI deployments
- Periodic audits, reviews, and compliance monitoring of AI systems
- Increased public trust in AI-enabled government systems

9.6 Key Performance Areas

KEY PERFORMANCE AREA	TARGET
AI Data Labs	100
COEs/ Incubation Centres	05
AI Start-ups supported for POC	1000+
Students trained	6,00,000+
Govt. Employees trained	1,50,000+
Youth employed in AI	5,000+
Government AI pilots/ Use Cases	50+
Research projects funded	100+
Datasets for innovation	50+
Conference, Seminars, Workshops, Hackathons etc.	100+

10. Closure Report

Third Party Auditor will submit a closure report for the AI mission. The closure report will broadly cover:

- i. Mission Snapshot
- ii. Objectives vs Achievements
- iii. Financial Closure
- iv. Governance & Implementation
- v. AI Use Cases – Status Summary
- vi. Outcomes & Public Value
- vii. Data, Ethics & Legal Compliance
- viii. Capacity Building & Ecosystem
- ix. Sustainability & Handover
- x. Key Challenges & Lessons Learnt
- xi. Forward Roadmap
- xii. Formal Closure Certification

Annexure – I

Composition of Governance Bodies for Chhattisgarh State Artificial Intelligence Mission (CG-AIM)

A. Composition of CM-Led Governing Body

Chairperson

- Hon'ble Chief Minister, Government of Chhattisgarh

Member-Secretary

- Chief Secretary, Government of Chhattisgarh

Members

- Hon'ble Minister, Finance
- Hon'ble Minister, Science and Technology
- Hon'ble Minister, Industries
- Hon'ble Minister, Health & Family Welfare
- Hon'ble Minister, School Education & Higher Education
- Hon'ble Minister, Agriculture
- Hon'ble Minister, Revenue
- Hon'ble Minister, Forest & Environment
- Hon'ble Minister, Urban Administration
- Hon'ble Minister, Panchayat & Rural Development
- Hon'ble Minister, Transport

B. Composition of CS-Led Steering Committee

Chairperson

- Chief Secretary, Government of Chhattisgarh

Member-Secretary

- Secretary, Department of Electronics & Information Technology

Members (Secretaries of Key Departments)

- Secretary, Commerce and Industries
- Secretary, Health & Family Welfare
- Secretary, School Education & Higher Education
- Secretary, Agriculture
- Secretary, Revenue
- Secretary, Forest & Environment
- Secretary, Urban Administration
- Secretary, Panchayat & Rural Development
- Secretary, Transport
- Secretary, Finance
- Secretary, Good Governance

C. Composition of Mission Directorate

Mission Director

- Mission Director, CG-AIM

Mission Directorate

- Officers and professionals drawn from the Department of Electronics & Information Technology / CHiPS and other departments, as approved by the Government, to support planning, implementation, monitoring, and coordination of Mission activities.

D. Implementing Agency

- **Department of Electronics & Information Technology / CHiPS**, Government of Chhattisgarh

The Implementing Agency may provide administrative, technical, and program management support to the Mission Directorate for execution of CG-AIM initiatives.

E. Technical Advisory Committee (Academician-Led)

Composition

The Technical Advisory Committee may comprise:

- Representatives from **IIIT Raipur, NIT Raipur, IIT Bhilai, and State Universities**
- One **AI Research Chair / Distinguished Fellow** nominated by the State
- One member from a **National research institution** (rotational basis)
- Representatives from **NASSCOM / CII / FICCI**
- Representatives from the **startup ecosystem**
